

[Event dashboard](#) > Environment Setup

Environment Setup

Before we start building, we need a working development environment. The setup depends on how you are accessing this workshop.

Choose Your Setup Path

Pick the path that matches your situation:

AWS Facilitated Event

If you are attending an AWS-hosted workshop or event, you will have access to a pre-configured VS Code Online IDE with AWS credentials already set up.

What you'll get

- VS Code Online IDE with Python pre-installed
- AWS credentials pre-configured
- The permissions needed for Bedrock
- Terminal access for running commands

What you'll need to do

- Enable Claude 4.5 Sonnet in Amazon Bedrock
- Set up a Python virtual environment
- Install the workshop dependencies

[Go to AWS Facilitated Event Setup](#)

Your Own AWS Account

If you are running this workshop independently, you will set everything up from scratch.

What you'll need

- Python 3.7+ installed locally
- An AWS account with appropriate permissions
- AWS CLI configured with your credentials
- The ability to enable Bedrock models in your account

What you'll set up

- AWS credentials and CLI configuration
- Claude 4.5 Sonnet model access in Bedrock
- A Python development environment
- The workshop dependencies

Go to Your Own AWS Account Setup

What You'll Have at the End

Regardless of which path you take, you will end up with:

- A Python virtual environment with the workshop packages installed
- Working AWS credentials for Bedrock
- Claude 4.5 Sonnet enabled and reachable
- A terminal and an editor
- A clean `agentic-ai-workshop` directory to build in

Time Estimate

- AWS Facilitated Event: about 6 minutes
- Your Own AWS Account: about 12 minutes
